

## BASF

Nate Christenson  
Agricultural Business, Agronomy and Economics  
Junior  
Chemical Sales Intern

I was raised on a family farm in Granger, Iowa. Last summer, I was given the opportunity to intern with BASF as a Chemical Sales Intern in Tifton, Georgia. Aside from learning about

new crops such as cotton, tobacco, and peanuts as well as getting accustomed to the culture of the south, I spent the majority of my internship monitoring and analyzing research plots to promote products and influence sales for BASF.

I worked on planning, organizing, and executing a large multi-day Field Tour for BASF in south Georgia as one of my main projects. I also spent a lot of my time collaborating with independent research partners and university

extension to plan and monitor a herbicide trial and a fungicide trial, where I got to put together an innovative sprayer attachment that placed fungicide inside the crop canopy rather than over the top of the plant. I really enjoyed the responsibility and freedom that BASF offered me over the summer, and would highly recommend the experience to other students.

I previously worked at West Central Co-op and will be working for Winfield this summer as a Sales Intern.
